

Region between $y = \sin(x)$, $y = -\sin(x)$ $[0, \pi]$

$$\# \text{ Area} = \int_a^b \underset{\text{top}}{f(x)} - \underset{\text{bottom}}{g(x)} dx$$

$$\text{Area} = \int_0^{\pi} \sin x - (-\sin x) dx = \int_0^{\pi} 2\sin x dx$$

$$= -2 \cos(x) \Big|_0^{\pi} = -2(\underbrace{\cos \pi}_{-1}) - -2(\underbrace{\cos(0)}_1)$$

$$\text{Area} = 4$$

$$+2 + 2 = \underline{\underline{4}}$$

Disk Method:

$$V = \pi \int_a^b (f(x))^2 dx$$

$$V = \pi \int_0^{\pi} (\sin x + 1)^2 dx$$

* $f(x)$ is radius of disc
* dx height of disc

$$(\sin x + 1)^2 = \pi \sin^2 x + 2 \sin x + 1$$

$$V = \pi \int_0^{\pi} \sin^2 x + 2 \sin x + 1$$

$$\int \sin^2 x$$
$$= \frac{x}{2} - \frac{\sin 2x}{4}$$

$$\Rightarrow \pi \left[\frac{x}{2} - \frac{\sin 2x}{4} + -2 \cos x + x \right]_0^{\pi}$$

$$x = \pi \Rightarrow \frac{\pi}{2} - 0 - (-2) + \pi = \frac{\pi}{2} + 2 + \pi$$

$$x = 0 \Rightarrow 0 - 0 - 2 + 0 = -2$$

$$\pi \left[\left(\frac{\pi}{2} + 2 + \pi \right) - (-2) \right]$$

$$\Rightarrow V = \pi \left(\frac{3\pi}{2} + 4 \right) \quad V = \frac{3\pi^2}{2} + 4\pi$$
